SUMMARY

Designer who builds. I ship production sites and products in TypeScript and Next.js, with motion, accessibility, and structured data built in from the first commit. I use AI coding tools daily to move faster, and I review everything they produce, because they are confident even when they are wrong.

EXPERIENCE

Graphlynk
November 2025 - Present

Co-Founder and Front-End Engineer · Remote

Productized entity verification for Google Knowledge Panels and AI search. In development.

- Built the front end in Next.js 15 and TypeScript with Supabase: a 15-question conversational intake with Zustand state, a public record ledger, and an entity-record reveal that assembles the verified profile at the end.
- Shipped motion with GSAP and Motion (Framer Motion): migrated the intake question shell to GSAP for tighter sequencing control, and built the reveal and minting animations.

Smart Deductions
December 2025 - April 2026

Founder, Designer and Engineer · Remote

Sole designer and engineer on a local-first financial SaaS for 1099 contractors, built end-to-end in code using Claude and CLI workflows.

- Architected a zero-knowledge parsing engine that turns any PDF bank statement into an IRS-ready, auto-categorized CSV in under five seconds. Zero servers, zero accounts.
- Designed and shipped high-fidelity dashboards with purposeful motion, semantic tokens, and nine Schedule C categories rendered consistently across donut, bar, transaction, and export surfaces.
- Built a command palette, dual chart views, and a full WCAG 2.1 AA component library, audited at every commit rather than retrofitted.

Intuit
March 2024 - Present

Front-Line User Researcher, Resolution Research · New York, NY

- Conduct live user research sessions for TurboTax and QuickBooks, surfacing software issues and friction points across tax-filing and small-business accounting flows.
- Synthesize findings into actionable insights that inform product and engineering decisions.

Independent Digital Consultant / Web Developer
May 2019 - Present

Designer and Engineer · Remote

Design and code websites for small businesses, artists, and brands across music, hospitality, and event entertainment. Recent work:

- **DMC Canada** (dmcdjcanada.com): sole designer-developer for the Canadian division of the DMC World DJ Championships. Reskinned the full Squarespace site in a one-week sprint through custom header code injection: dark theme, custom type, injected hero, contact panel, and ticker. Lighthouse 94, zero revision rounds.
- **Jersey Club Radio** (jerseyclubradio.com): React and Vite 24/7 streaming platform with a Supabase backend on Vercel, four schema types, persistent mini-player, and accessible dark UI. Currently live in Beta.
- **Julie Schatz Music** (julieschatzmusic.com): editorial site for a Brooklyn-based violinist. 17 JSON-LD blocks wired through @id references, local-first ceremony picker, Formspree booking integration.
- **Bangin' & Beats** (banginandbeats.com, formerly Take Me Back Bingo): designed and built the site for a Hip-Hop and R&B throwback party brand running live nights in NY/NJ, then rebuilt it end to end when the original name couldn't be trademarked. New identity, a renamed in-browser game, brand-guard tests on every page, and a domain migration with all 46 old URLs redirected in one hop.

Frankpella LLC
July 2023 - Present

SEO and Discovery Consultant · Remote

- Consult emerging artists on SEO, AEO, GEO, Google Knowledge Panel management, public relations and press placement, iTunes charting, and music discovery strategy.
- Designed and built deejaytjr.com for a three-time DMC Canadian Champion: Astro, zero layout shift, structured data generated from the page content, pages in three languages, and a custom site editor that saves to the repository.

i9 Sports
July 2022 - January 2026

Resource Manager · Remote

- Contributed product ideas adopted by the team, including a CRM chatbot, animated scroll interactions, and an email feature for schedule delivery. Managed high-volume customer-facing support.

SKILLS

Design: End-to-End Product Design, Interaction Design, Systems Thinking, Information Architecture, Prototyping, WCAG 2.1 AA Accessibility, Figma

Engineering: React, Next.js, Vite, TypeScript, Tailwind CSS, GSAP, Framer Motion, WebGL shaders, Semantic HTML, Modern CSS, Supabase, Vercel, Stripe, Schema.org, Git / GitHub

Specialties: Privacy-First and Local-First Architecture, Design Systems, SEO and Structured Data, Motion Systems, Fintech UX
